Arris dcx3600-m ir sensor location

Having an issue. Setup a Harmony for an elderly couple. As far as I know the DCX3600 only supports power toggle instead of dedicated On-Off commands. For a short while this worked as I set the DVR to never turn off. But if the power goes out or some other expected event and the DVR gets turned off I have to instruct the couple to go into the devices section, select the device and power it back on. While this seems simple, its absolutely not easy to convey. Any ideas on what I can do instead? I see Spectrum also has a different looking DVR, the Spectrum 210 or something like that. Does that one support On-Off commands? Page 2 3 comments We aim to show you accurate product information. Manufacturers, suppliers and others provide what you see here, and we have not verified it. This 38-56kHz IR receiver extend the IR signal received from the remote control and relay via the wire to the equipment (cable box, set top boxes, etc...) connected to it. You may now hide your cable box or component inside your entertainment center system cabinet, closet, behind a closed door and still able to be control it with your IR remote control.
